

Subnivean Snake

Subnivean Snake Rules

- The snake's orthogonal journey begins and ends at the indicated locations:  → 
- The number of visited cells in each row/column are given.
- The snake cannot visit cells adjacent (orthogonally/diagonally) to those already visited.
- At burrows (●) the snake can dig and reemerge elsewhere traveling in the same direction.
- When reemerging, the snake travels straight exactly as far it travelled prior to burrowing.
