# Heaven and Earth

True Yin-Yang[1]: Partition the grid into four edge-connected regions—two black and two white. The four regions should include a 1×1 region of each color, which is wholly surrounded (including diagonally) by opposite color cells. Additionally, no 2×2 square can be entirely one color. ([Example](.).)

Grid 1   Grid 2   Grid 3

---

[1] This is an original variant of a well known logic puzzle type known as '[Yin-Yang](.).'
